

MASSACHUSETTS – RHODE ISLAND WATER SCIENCE CENTER WATER YEAR 2005 ANNUAL WATER-DATA REPORT

The USGS Annual Water-Data Report will only be available via the world-wide-web from this water year onward. The USGS requires that on or before water year 2006 the Annual Water-Data Report be published using a new web-based format.

The benefits of the web based USGS Annual Water-Data Report:

1. A consistent data format for all surface-water, ground-water, and water-quality stations among all USGS Water Science Center's.
2. A mapper tool allows the user to select sites from a map by clicking on the symbol for that site. The mapper tool allows the user to zoom in and out and pan.
3. The ability to select sites by counties (currently available).
4. The ability to select sites by river basins (**not currently available**) (for example in the future the user could select all the sites in the Connecticut River Basin – CT, MA, NH, and VT)
5. In the PDF file for each surface-water and ground-water stations is an annual hydrograph of streamflow or ground-water level.
6. Each station's PDF file is linked to the USGS National Water Information System (NWSI) web page (<http://waterdata.usgs.gov/nwis>) for real time, historical data, and statistics for that site. The link is accessed by clicking on the station number and name - in **bold blue** – at the top of the first page
7. A link is provided to the web-based Annual Water-Data Report **Documentation** (<http://pubs.usgs.gov/wdr/2005/documentation.html>) for Introductory material: Details and explanations regarding site numbering, data reported, and accuracy of data.
8. A link is provided to the web-based Annual Water-Data Report **Related information and publications** (<http://pubs.usgs.gov/wdr/2005/relatedinfo.html>) for Related links to USGS data, methods (TWRIs), special programs and networks, and past annual data reports.
